Preferred MENTION PRICE LIST No. 513
MARCH 27, 1953

WOODS
SIDE OF THE PROPERTY OF THE PROPERT

Yellow Eureka

ENSILAGE, 114 days. A yellow strain of Virginia Eureka, similar in growth and production but has more vitamins and food value, has larger ears, higher production of grain, making a silage much more hubritious and palatable. The stalk is more Scoppart and easier to har vest and pull the ough the cutter box without any loss in total yield. It has large ears, a foot long, with big golden grain.

OPEN POLLINATED CORN Quart (2 lbs.), postpaid, 65c. on all Varieties

Wood's Permanent Pasture and Hay Mixtures

Wood's Permanent Pasture Mixture seeded years ago, now more productive than ever. It's grasses and clovers make their maximum growth at different times throughout the year for abundant year-round grazing. It is more productive, nutritious, palatable and economical than Ladino with Orchard or Tall Fescue.

Sow 25 lbs. per acre in March or April. Experiment station tests show yields of pasture and hay increase as more seed per acre is sown, up to 25 lbs., and as more different compatible clovers and grasses are added. Mixtures of many grasses and clovers, including Ladino, Orchard, Alfalfa and Red Clover yielded about a third more than one clover and one grass. Ladino with Ky. 31 yielded 5,435 lbs. dry weight in 1950 but only 1,561 in 1951 as the Ladino winterkilled, leaving no legume to furnish nitrogen to the grass. The quality and feeding value was also cut. They concluded: "Using more than one legume in a mxture is a good insurance investment because species differ in adaptability to soil, climatic and biological growth factors."

Hundreds of pastures were ruined by the 1952 drought, killing Ladino, their only legume. Thousands of prize animals have died bloating when only one grass was planted and disappeared, leaving only Ladino clover to graze on. Our mixtures, proved superior for 4 generations, contain 9 grasses and 9 legumes, are well balanced, and cannot bloat. Nitrogen from the legumes keeps the grasses dark green.

Ladino, Orchard Grass and Ky. 31 or Alta Fescue is the base, with disease resistant Red Clover and Alfalfa, Dixie White Clover, White Dutch Clover, New Zealand Certified Permanent Pasture White Clover, Alsike, Korean and Kobe Lespedeza, **Dallis** Grass, Ky. Blue, Red Top, Meadow Fescue, etc.

They grow off faster and flourish in dry summers, crowding out weeds that retard Ladino and Orchard or Tall Fescue sown alone. They bear abundantly many years, minimizing the seeding cost. They are high is protein, minerals and vitamins, are extremely nutritious and palatable. Animals eat more and grow faster or produce more milk, saving feed bills.

Grasses and clovers in Wood's Permanent Hay Mixtures mature together, making bumper crops easily cured. They recover quickly, giving several big cuttings of the finest quality hay every year.

Dallis Grass, Imported, Extra Fancy Included in all our Permanent Pasture Mixtures

The Splendid Permanent Grass for Year Round Pastures from Mountains to the Gulf, as it comes nearer growing the year round than most grasses. Grows rapidly except in very cold weather. A bunch grass with deep roots. It stops erosion, is fair for hay and excellent for grazing. All livestock relish it, and leave Ky. Blue and other fine pasture grasses for it. At an experiment station it fattened 10 steers per acre. It allows clovers, lespedezas and other good pasture grasses to grow freely with it, but chokes out objectionable weeds. Once established it lasts indefinitely; not a pest. It thrives on all soils. Sow 10 lbs. per acre in early spring or fall in every grass, clover or lespedeza field. f.o.b. per 100 lbs., \$110.00; postpaid, 25 lbs., \$30.55; 10 lbs., \$12.70.

Permanent Pasture and Hay Mixtures

Price: postpaid, 25 lbs. \$10.30. F.O.B. 25 to 99 lbs. 37c. lb.; 100-lb. bag, \$35.00; 5-bag lots, \$34.50.

Pasture Mixture 1, for light gravelly or sandy soil.

Pasture Mixture 2, for good loam or clay soil.

Pasture Mixture 3, for most bottom land.

Hay Mixture 6, for light gravelly or sandy soil.

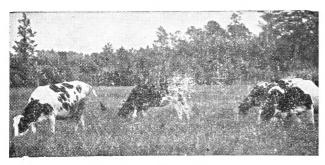

Hay Mixtture 7, for good loam or clay soil.

Hay Mixtutre 8, for moist bottom land.

Southern Permanent Pasture and Hay Mixture 12 produces tremendous yields of the finest pasture and hay on both light and heavy soils in the Southern Coastal area from Virginia to the Gulf.

Wood's Grain Pasture Mixture

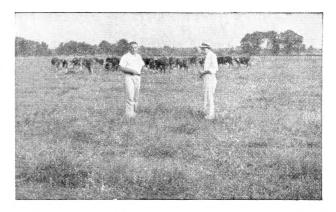

Furnishes more grazing in less time and at less cost than other spring crops. Highly nutritious balanced diet. Cannot cause bloat. Reduces grain feed when costs are high. Saves labor in feeding. Small grains make more growth in cool weather than pasture grass or legumes. Our mixture contains Oats and Rye Grass, Beardless Barley and Atlas Wheat, which grow in colder weather than cats. Dwarf Essex Rape stays green and palatable in the coldest weather, high in vitamins and relished by all livestock, particularly hogs and poultry. Peas and Hairy Vetch supply proteins for growth and warmth in cold weather and enrich the soil with nitrogen. The ideal nurse crop for seeding permanent pasture mixtures. Drill 100 lbs. per acre in March or April. 100-lb. bag \$9.00; 5-bag lots \$8.75.

Wood's Grain Pasture Mixture, the most economical feed relished by all livestock, grows off faster in cold weather and keeps more animals per acre in good healthy condition when permanent pastures are short, stimulating milk flow with less grain, hay and silage. Disc in on all lespedeza fields for early feed Ideal to supplement permanent pastures while they recover from close grazing. Popular for poultry and hogs. Contains rape and legumes balanced with grain so it cannot cause bloat.

WOOD'S GRAIN HAY MIXTURE

Makes bumper crops of nutritious hay, easy to cure, relished by all livestock. A balanced ration of proteins, vitamins and other food elements. Much more productive and palatable than oats or any other crop sown alone. Ideal nurse crop for seeding permanent grass and clover, as it comes off early. Sow 100 lbs. acre in March or April. Fertilize well. 100-lb. bag, \$9.00; 5-bag lots, \$8.75 f.o.b.

Ben Mayo (right), a booster for Wood's Permanent Pasture Mixtures, shows our Bill Wood a 55-acre pasture in Edgecombe Co., N. C., last August in one of the worst droughts. 135 cattle could not keep it grazed down. Although seeded 25 years ago, it is much more productive and palatable than a nearby pasture seeded 3 years ago with Tall Fescue and Ladino Clover, which is about gone. The many grasses and clovers in the old pasture still furnish a balanced diet that never caused bloat. Dallis grass furnished the most grazing during the drought.

How to Fertilize and Seed a Pasture

LIME. If the field has not been limed recently apply about a ton per acre. It is best to plow or disc the lime into the soil before planting.

FERTILIZER. Deep roots withstand droughts. Encourage deep root growth by plowing down $\frac{1}{2}$ of the fertilizer. Harrow in the rest just before seeding. Use 2-12-12 on heavy or rich soils. Use 5-10-10 on light or poor soil. Up to 1,000 lbs. per acre pays.

SEEDING. The secret of good stands is seed shallow on firm seed beds and press the seed to the soil. Grass and clover seedlings have short roots and must catch hold quickly or die. They smother out if crowded over ¼ inch on heavy soils or ½ inch on light sandy soils. Before planting, harrow and roll until seedbed is firm. Harrow the seed in very lightly, then press firm with cultipacker, or roll.

Sow 25 lbs. per acre in early spring or early fall so the seedlings can grow deep roots to withstand summer drought and heat or winters freezing and thawing. In the Piedmont or Mountains sow our Permanent Pasture or Hay Mixtures 1 to 8 to suit your soil type. In the Coastal Plains sow our Southern Permanent Pasture and Hay Mixture 12.

Renovating Worn Out Pastures or Broom Sedge Wasteland, where time and labor does not permit plowing, follow the above steps as closely as practical. Disc or harrow in the lime and fertilizer. Seed and roll firm. Lime gets rid of the broom sedge and encourages legumes. The many legumes in our mixtures enrich the soil with nitrogen, stimulate the growth of good pasture grasses and increases their protein mineral and vitamin content, particularly in hot dry summers. A pasture yields about 3 times more digestible nutrients after renovation.

SWAMPS may make your most valuable pasture if ditched or drained and Pasture Mixture 3 sown.

Wood's S-360 White Flinty

135 days. High yielding Southern prolific, pure white milling corn. Weevil resistant. Averaged 129.4 bu. per acre 3 years in a Carolina test with excellent shuck, weevil resistance and grain quality. Alabama recommended it as one of the highest yielding pure white corns for 3 years in Central and South Ala. tests, with good weevil resistance and tops in 1950 North Ala. tests, outyielding Dixie 18 and N.C. 27.

S-360 won at the S. C. State Fair 2 years. T. S. DuBose, Sumter, S. C., planted it 6 inches apart for the 100-bu. Club prize. It had 2 to 3 good ears per stalk, vigorous dark green color, stood up in a storm that damaged nearby corn. Estimated to yield 150 bu. per acre.

Wood's V-16 Extra Early

108 days. Our earliest yellow corn for mountains or extra early feed, hogging or late planting in the South. Roasting ears 70 days. Better yield, grain quality and resistance to weevil, disease and lodging than V-25. 8 days earlier than U.S. 13, lower ears, shorter, stronger stalk and yielded more. In N. C. tests 2 years it outyieleded Ohio C-54 10%, was more prolific, earlier, grain much drier at harvest. More resistant to leaf blight, has better ears, larger, sounder grain, deeper color.

Morgantown, W. Va.: V-16 "Looked good," stood well, resisted corn borers.

V-40 has large beautiful ears with 20 rows of deep grain, high shelling %

Wood's V-40 Yellow Dent

115 days. High yields in the Upper South. Excellent for early feed, hogging or late planting in the deep South.

Many southern farmers plant it to harvest early and follow with small grain. Short stocky stalks. Ears uniformly low, easy to harvest. Outyielded all corns 2 years in N. C. Upper Mountain tests, best grain quality, strong stalks, matured early.

"V-40 outyielded any corn I ever grew, 25 bu. per acre. Stood drought and storm better."—G. F. Jarrett, Burke Co., N. C.

"V-40 withstood storms better and outyielded other corns 10 to 15 bu. per acre." L. A. Kessinger, Giles Co., Va.
